16. ABSTRACT

The U.S. Environmental Protection Agency is demonstrating and evaluating the use of photochemical models. These models require accurate and complete inventory data bases. To insure that all major volatile organic compound (VOC) sources are included in emission inventory data bases, and to insure that VOC emission inventories for photochemical oxidant nonattainment areas include all sources that are subject to Reasonably Available Control Technology (RACT), this directory of VOC sources covered by RACT requirements has been derived independently of EPA inventory data. This report is Volume 3 of a 3-volume series.

This document is issued by the Environmental Protection Agency to report technical data of interest to a limited number of readers. Copies are available free of charge to Federal employees, current EPA contractors and grantees, and nonprofit organizations - in limited quantities - from the Library Services Office (MD-35), U.S. Environmental Protection Agency, Research Triangle Park, North Carolina 27711; or, for a fee, from the National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161.

This report was furnished to the Environmental Protection Agency by PEDCo Environmental, Inc., 1006 N. Bowen Road, Arlington, Texas 76012, in fulfillment of Contract No. 68-02-3512. The contents of this report are reproduced herein as received from PEDCo Environmental, Inc. The opinions, findings and conclusions expressed are those of the author and not necessarily those of the Environmental Protection Agency.

ACKNOWLEDGMENTS

PEDCo Environmental, Inc. prepared this report for the U.S. Environmental Protection Agency, Office of Air Quality Planning and Standards (OAQPS). Mr. Thomas N. Braverman was the OAQPS Task Manager. Mr. Thomas C. Ponder, Jr. served as the PEDCo Project Director, and Mr. Dilip H. Mehta served as the PEDCo Project Manager. Mr. Mehta and Dr. John E. Spessard were the principal authors.

SECTION 1

INTRODUCTION

The U. S. Environmental Protection Agency (EPA) is demonstrating and evaluating the use of photochemical models. These models require accurate and complete inventory data bases. To ensure that all major sources of volatile organic compounds (VOC) are included in emission inventory data bases and that VOC emission inventories for photochemical oxidant nonattainment areas include all sources subject to Reasonably Available Control Technology (RACT), EPA contracted with PEDCo Environmental to prepare a directory of VOC sources covered by RACT requirements. The directory has been derived independently of current information in the National Emissions Data System (NEDS) and is presented in three volumes.

This is Volume 3 and includes the following Group 3 RACT source categories:

1. Fabric printing plants
2. Polymer and resin manufacturing plants
3. Styrene butadiene rubber manufacturing plants
4. Natural gas processing plants
5. Synthetic organic chemical manufacturing plants
6. Bulk gasoline terminals

At the time this document was prepared, it was likely that EPA would drop one or more of the above source categories from RACT requirements. Sections 2 through 7 of this volume provide information on the above categories. Each section briefly describes the types and number of sources included in a category. Sources are tabulated alphabetically by state and by county within each state. The name, address, county, Air Quality Control Region (AQCR), and area photochemical oxidant attainment status for each source are listed.

Volume 1 includes the following Group 1 RACT source categories:

1. Automobile and light-duty truck surface coating plants
2. Can surface coating plants
3. Coil surface coating plants
4. Fabric surface coating plants
5. Large appliance surface coating plants
6. Metal furniture surface coating plants
7. Magnet wire surface coating plants
8. Paper products surface coating plants

Volume 2 includes the following Group 2 RACT source categories:

1. Petroleum refineries
2. Chemical synthesis pharmaceutical manufacturing plants
3. Pneumatic rubber tire manufacturing plants
4. Flatwood paneling surface coating plants
5. Industrial perchloroethylene drycleaners
6. Publication rotogravure printing companies
7. Packaging rotogravure and flexographic printing companies

SECTION 2

FABRIC PRINTING PLANTS

Fabric printing usually consists of the roller application of various dye pastes to a cloth substrate. After this application, the cloth is chemically treated to fix the color; and a final wash and rinse are used to remove any residue. The quantity of dye used depends on the fabric, color, and desired finish. Some synthetic textiles require the use of special carriers to achieve satisfactory penetration of the dye into the fabric.

A total of 99 fabric printing plants are located in 16 states. There are 47 plants in attainment areas for photochemical oxidants and 52 plants in nonattainment areas. Table 2-1 summarizes the distribution of these plants by state. Following Table 2-1, the plants are listed alphabetically by state and by county within each state. PEDCo obtained this inventory from the EPA Project Officer.

TABLE 2-1. DISTRIBUTION OF FABRIC PRINTING PLANTS BY STATE.

State	Number of plants in photochemical oxidants area

SECTION 3

POLYMER AND RESIN MANUFACTURING PLANTS

The polymer and resin industry includes plants that convert monomer or chemical intermediate materials into resinous polymer. Raw materials are products obtained from the petrochemical and organic chemical industries.

A total of 121 polymer and resin manufacturing plants are located in 23 states. There are 38 plants in attainment areas for photochemical oxidants and 83 plants in nonattainment areas. Table 3-1 summarizes the distribution of these plants by state. Following Table 3-1, the plants are listed alphabetically by state and by county within each state. PEDCo obtained this inventory from the EPA Project Officer.

SECTION 4

STYRENE BUTADIENE RUBBER MANUFACTURING PLANTS

Rubber is an elastomer which can be processed (vulcanized) into a material that can be stretched to at least twice its original length and will return with force to approximately its original length when the stress is removed. Synthetic rubber is produced by polymerization or copolymerization of monomers.

Styrene-butadiene rubber (SBR) is produced by emulsion polymerization. Fugitive volatile organic emissions from the emulsion process are possible because of leaking valves and seals. Other volatile organic emissions arise from monomer and solvent recovery processes, from product drying, and from storage areas and tanks.

A total of 23 styrene butadiene rubber manufacturing plants are located in 14 states; 5 plants are in attainment areas for photochemical oxidants, and 18 plants are in nonattainment areas. Table 4-1 summarizes the distribution of the SBR manufacturing plants by state. Following Table 4-1, the plants are tabulated alphabetically by state and by county within each state. For each source the name, address, county, AQCR, and the area photochemical oxidant attainment status are listed. PEDCo obtained this inventory of SBR manufacturing plants from the EPA Project Officer.

SECTION 5

NATURAL GAS PROCESSING PLANTS

Natural gas consists essentially (about 95 percent) of saturated hydrocarbons. Methane is the principal component, but heavier paraffins occur in decreasing proportions. The 5 percent nonhydrocarbon balance of raw natural gas consists of nitrogen, carbon dioxide, and possible trace amounts of hydrogen sulfide and helium. Natural gas is processed to remove the heavier hydrocarbons and most of the impurities and moisture. Hydrocarbon emissions from natural gas processing are mainly fugitive in nature and result from leaks in pumps, valves, compressors, and other machinery.

A total of 801 natural gas processing plants are located in 33 states. There are 642 plants in attainment areas for photochemical oxidants and 159 plants in nonattainment areas. Table 5-1 summarizes the distribution of these plants by state. Following Table 5-1, the plants are listed alphabetically by state and by county within each state. In compiling this inventory, PEDCo used the following source:

Cantrell, Ailleen. Worldwide Directory - Refining and Gas Processing 1980-1981. Oil & Gas Journal, January 1981.

SECTION 6

SYNTHETIC ORGANIC CHEMICAL MANUFACTURING PLANTS

The synthetic organic chemical manufacturing industry converts hydrocarbons that are obtained mainly from petroleum, coal, and natural gas into synthetic intermediates and products. Synthetic organic chemicals include dyes, organic pigments, medicinal chemicals, flavor and perfume materials, elastomers, surface active agents, and pesticides.

A total of 1318 synthetic organic chemical manufacturing plants are located in 46 states, Puerto Rico, and the Virgin Islands. There are 342 plants in attainment areas for photochemical oxidants and 976 plants in nonattainment areas. Table 6-1 summarizes the distribution of these plants by state. Following Table 6-1, the plants are listed alphabetically by state and by county within each state. In compiling this inventory, PEDCo used the following sources:

Radian Corporation. Organic Chemical Producers' Data Base.
Austin, Texas, March 1980.

SRI International. 1980 Directory of Chemical Producers.
Menlo Park, California, January 1980.

TABLE 6-1. DISTRIBUTION OF SYNTHETIC ORGANIC CHEMICAL MANUFACTURING PLANTS BY STATE.

State	Number of plants in photochemical oxidants area	
	Attainment	Nonattainment

SECTION 7

BULK GASOLINE TERMINALS

Petroleum liquids are stored in fixed-roof and floating-roof tanks at refineries, terminals, and tank farms and along pipelines. Liquids from these tanks are generally unloaded into tank cars, tank trucks, ships, barges, or pipelines at bulk terminals. Losses of VOC occur as hydrocarbon and organic vapors in empty cargo tanks are displaced to the atmosphere by the liquid loaded into the cargo tank.

A total of 904 bulk gasoline terminals are located in 40 states, the District of Columbia, and Guam. There are 197 terminals in attainment areas for photochemical oxidants and 707 terminals in nonattainment areas. Table 7-1 summarizes the distribution of these terminals by state. Following Table 7-1, the plants are listed alphabetically by state and by county within each state. In compiling this inventory, PEDCo used the following source:

Status of Petroleum Tank Terminals. Compliance Data System. January 1980.

TABLE 7-1. DISTRIBUTION OF BULK GASOLINE TERMINALS BY STATE.
